

Phillip was the first born of four children in the Banks household. Learning to code by the age of 10 Phillip learned to lead and make an impact from a young age. Along with his father and brother Phillip started as a volunteer for the initial Southern California Linux Expo (SCALE) at age 12 (which he still does to this day). His early exposure to technology led him into other arenas and now travels helping and empowering youth. Speaking, meeting and introducing influential people in the tech community it has led him to working with groups like Computer4Kids and building networks for underprivileged schools in Mexico. Currently along with his family making up the Banks Family Tech he teaches coding and technology to youth.
